Dissolve Tech Tissue
**RESISTANT LIKE A HAND
TOWEL, DISSOLVABLE
LIKE TOILET PAPER.**

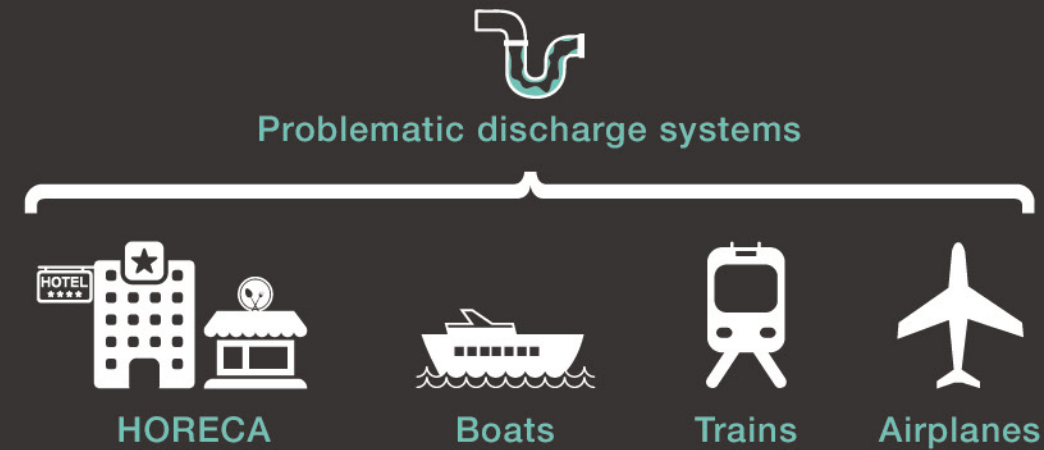

DIS SOLVETECH

RESISTANT
DISSOLVABLE
EXCLUSIVE

1 AREAS OF USE

Dissolve Tech, thanks to the fact that it dissolves in water, prevents the risk of pipe drainage clogs in hotels, farm holiday establishments, boats, trains and airplanes and in general, in all those locations that see a high turnover of people, places that are prone to experience clogging problems or that present limitations as far as drainage discharge is concerned.

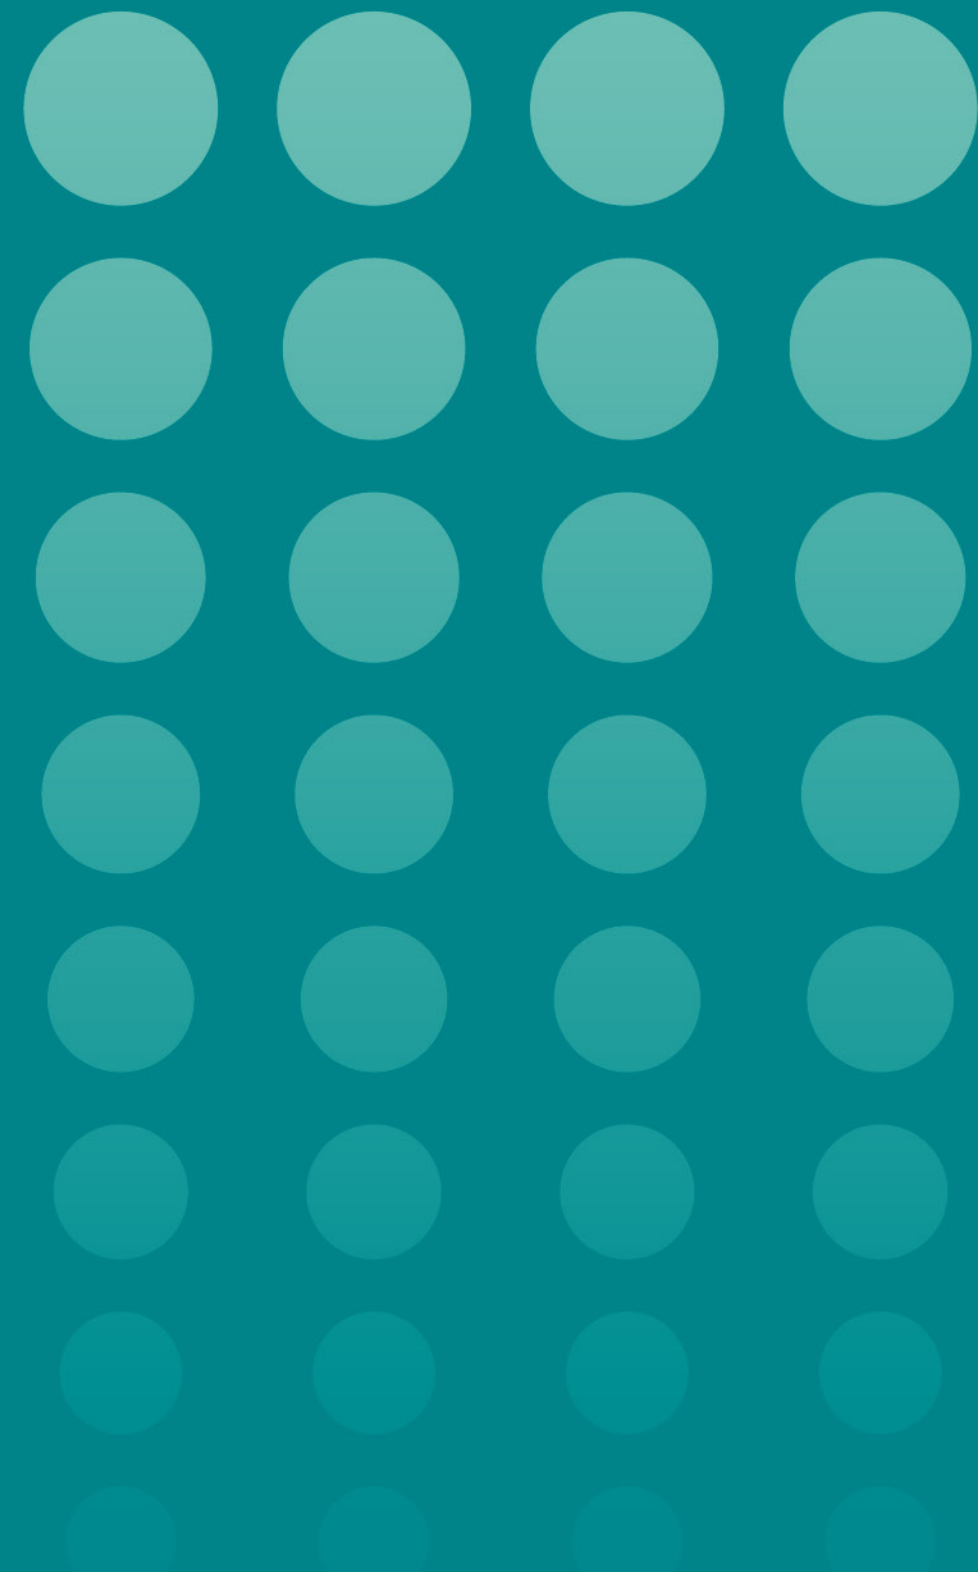

2 IF DISPOSED OF IN THE WC, IT DOES NOT CAUSE CLOGGING

The new Dissolve Tech hand towel is resistant and dissolvable. During use, Dissolve Tech behaves like a normal towel; once used, it can also be disposed of in the WC, where it will completely dissolve with no risks of clogging, just like regular toilet paper.

3 WHY DISSOLVE TECH

A certified product that differentiates itself from the competition for three fundamental characteristics:

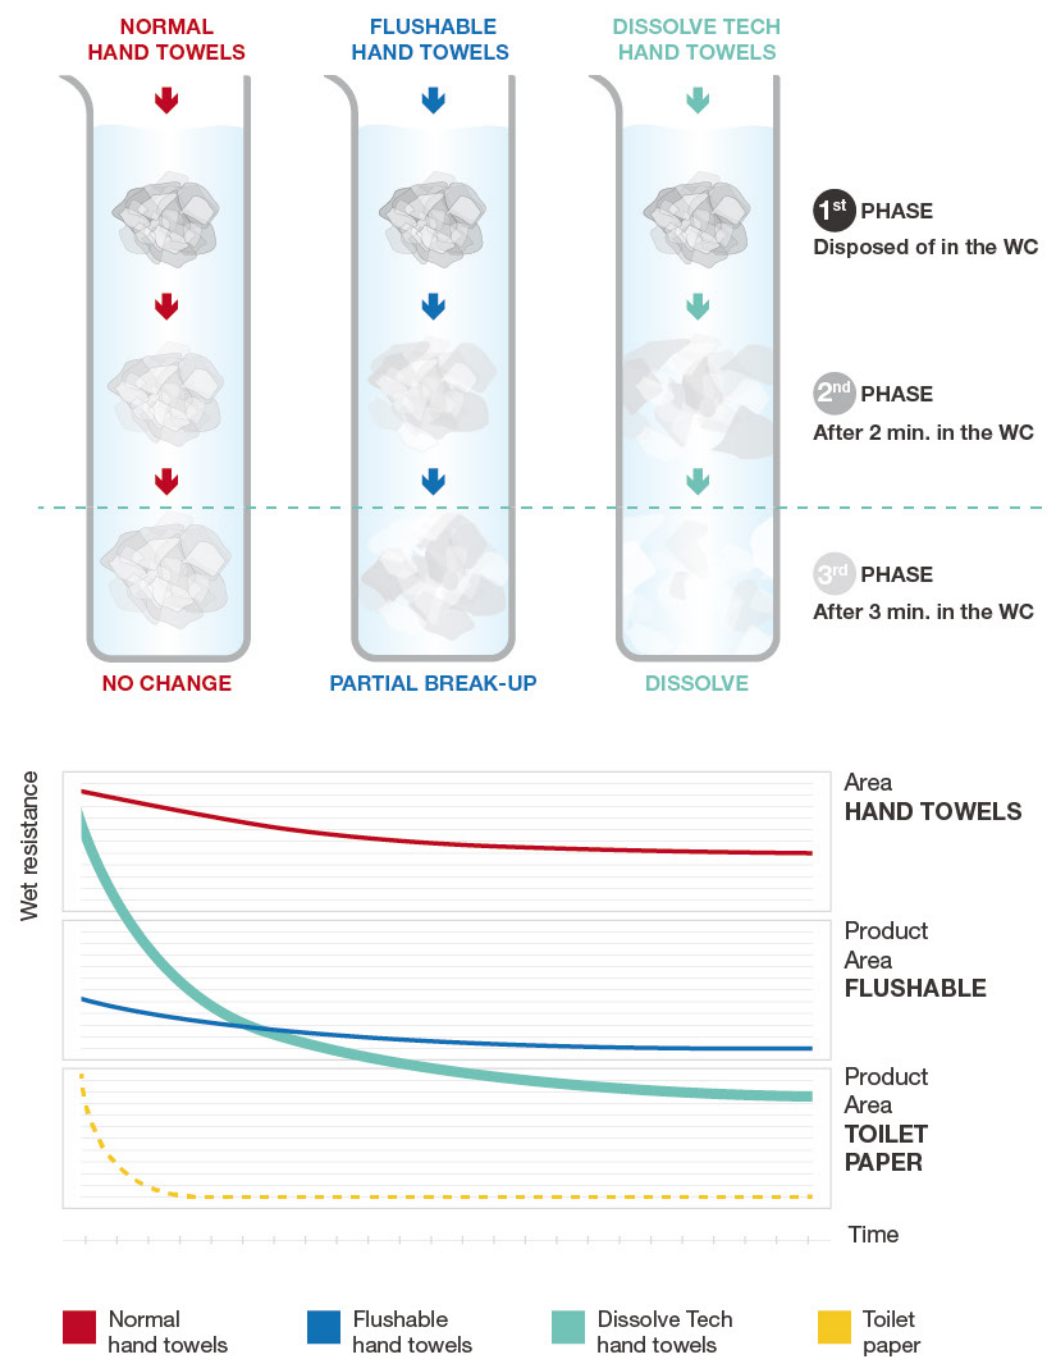

- Resistance**
Used dry, it has the resistance and absorbency of a hand towel.
- Dissolvable**
It can be disposed of in the WC, where the paper will completely dissolve, avoiding any risk of clogs. More than half of all clogging problems are caused by regular hand towels being disposed of in toilets.
- Exclusive**
Dissolve Tech is an exclusive Sofidel product.

4 PRODUCT COMPARISON

The graph illustrates the relationship between wet strength and time, comparing Dissolve Tech to other products belonging to the same segment. Dissolve Tech has an initially very high wet strength that ensures the same resistance and absorbance as a regular hand towel during the wiping of wet hands. After three minutes the towel's resistance precipitates, making Dissolve Tech comparable to toilet paper.

Comparison between Dissolve Tech and other types of hand towels disposed of in the WC:
